T123™ Nickel Powder
(UK Bags)

T123™ is a high purity nickel powder composed of discrete nickel particles having a spiky morphology. T123™ is produced by a unique carbonyl gas refining process at the Clydach Nickel Refinery in the UK.

T123™ is recognized as an industry standard nickel powder for powder metallurgy applications:
• Spiky, needle-like texture designed specifically for powder metallurgy applications
• Tight size distribution optimized for easy mixing and excellent mechanical properties of sintered parts
• Uniform dispersion provides repeatable dimensional change of sintered parts
• Strengthens and toughens to improve fatigue strength
• Hardens heat-treated steels

T123™ is also widely used as a metal binder:
• Enhances corrosion resistance and toughness of hard metals
• Strengthens and toughens diamond tools
• Wets and aids the densification of tungsten heavy alloys

For further information about our products, please visit our website (www.vale.com) or contact a regional sales representative.

**Product Description**

**Form**
- Fisher sub-sieve size: 3.5 - 4.5 µm
- Bulk density: 1.6 - 2.6 g/cm³
- Sieve test: ≤0.1 wt% +200#

**Packaging**
- 2 tonne bulk bags

**Typical Analysis (wt %)**
